

Spring Boot - Custom Application Properties

Problem

Problem

- You need for your app to be configurable ... no hard-coding of values

Problem

- You need for your app to be configurable ... no hard-coding of values
- You need to read app configuration from a properties file

Solution: Application Properties file

Solution: Application Properties file

- By default, Spring Boot reads information from a standard properties file

Solution: Application Properties file

- By default, Spring Boot reads information from a standard properties file
 - Located at: **src/main/resources/application.properties**

Solution: Application Properties file

- By default, Spring Boot reads information from a standard properties file
 - Located at: **src/main/resources/application.properties**

Standard Spring Boot
file name

Solution: Application Properties file

- By default, Spring Boot reads information from a standard properties file
 - Located at: **src/main/resources/application.properties**
- You can define ANY custom properties in this file

Standard Spring Boot
file name

Solution: Application Properties file

- By default, Spring Boot reads information from a standard properties file
 - Located at: **src/main/resources/application.properties**
- You can define ANY custom properties in this file
- Your Spring Boot app can access properties using **@Value**

Standard Spring Boot
file name

Solution: Application Properties file

- By default, Spring Boot reads information from a standard properties file
 - Located at: **src/main/resources/application.properties**
- You can define ANY custom properties in this file
- Your Spring Boot app can access properties using **@Value**

Standard Spring Boot
file name

No additional coding
or configuration required

Development Process

Step-By-Step

Development Process

Step-By-Step

1. Define custom properties in `application.properties`

Development Process

Step-By-Step

1. Define custom properties in **application.properties**
2. Inject properties into Spring Boot application using **@Value**

Step 1: Define custom application properties

Step 1: Define custom application properties

File: src/main/resources/application.properties

```
#  
# Define custom properties  
#
```

Step 1: Define custom application properties

File: src/main/resources/application.properties

```
#  
# Define custom properties  
#  
coach.name=Mickey Mouse
```

Step 1: Define custom application properties

File: src/main/resources/application.properties

```
#  
# Define custom properties  
#  
coach.name=Mickey Mouse  
team.name=The Mouse Club
```

Step 1: Define custom application properties

File: src/main/resources/application.properties

```
#  
# Define custom properties  
#  
coach.name=Mickey Mouse  
team.name=The Mouse Club
```

You can give ANY
custom property names

Step 2: Inject Properties into Spring Boot app

Step 2: Inject Properties into Spring Boot app

```
@RestController  
public class FunRestController {
```

Step 2: Inject Properties into Spring Boot app

```
@RestController  
public class FunRestController {  
  
    // inject properties for: coach.name and team.name
```

Step 2: Inject Properties into Spring Boot app

```
@RestController  
public class FunRestController {  
  
    // inject properties for: coach.name and team.name  
  
    @Value("${coach.name}")  
    private String coachName;
```

Step 2: Inject Properties into Spring Boot app

```
@RestController  
public class FunRestController {  
  
    // inject properties for: coach.name and team.name  
  
    @Value("${coach.name}")  
    private String coachName;
```

File: src/main/resources/application.properties

```
#  
# Define custom properties  
#  
coach.name=Mickey Mouse  
team.name=The Mouse Club
```

Step 2: Inject Properties into Spring Boot app

```
@RestController  
public class FunRestController {  
  
    // inject properties for: coach.name and team.name  
  
    @Value("${coach.name}")  
    private String coachName;
```

File: src/main/resources/application.properties

```
#  
# Define custom properties  
#  
coach.name=Mickey Mouse  
team.name=The Mouse Club
```

Step 2: Inject Properties into Spring Boot app

```
@RestController  
public class FunRestController {  
  
    // inject properties for: coach.name and team.name  
  
    @Value("${coach.name}")  
    private String coachName;  
  
    @Value("${team.name}")  
    private String teamName;  
  
    ...  
}
```

File: src/main/resources/application.properties

```
#  
# Define custom properties  
#  
coach.name=Mickey Mouse  
team.name=The Mouse Club
```

Step 2: Inject Properties into Spring Boot app

```
@RestController  
public class FunRestController {  
  
    // inject properties for: coach.name and team.name  
  
    @Value("${coach.name}")  
    private String coachName;  
  
    @Value("${team.name}")  
    private String teamName;  
  
    ...  
}
```

File: src/main/resources/application.properties

```
#  
# Define custom properties  
#  
coach.name=Mickey Mouse  
team.name=The Mouse Club
```

Step 2: Inject Properties into Spring Boot app

```
@RestController  
public class FunRestController {  
  
    // inject properties for: coach.name and team.name  
  
    @Value("${coach.name}")  
    private String coachName;  
  
    @Value("${team.name}")  
    private String teamName;  
  
    ...  
}
```

No additional coding
or configuration required

File: src/main/resources/application.properties

```
#  
# Define custom properties  
#  
coach.name=Mickey Mouse  
team.name=The Mouse Club
```
